# Discover Plasma

# Science Teachers Day 2007

## Science Teachers Day

for Middle and High School Teachers

Tuesday November 13, 2007

Rosen Centre Hotel. 9840 International Dr.

Orlando, FL 32819

### Take

information about plasma science and fusion energy to your classrooms. Science Teachers Day provides an opportunity to attend specialized talks and workshops, to interact with well-known plasma physicists, and to gather complimentary resource materials for your school.

### Learn

from members of national laboratories, universities and industry how you can use the topic of plasmas in your current curriculum to satisfy state and national science standards. During Science Teachers Day, national and international plasma research scientists share their knowledge and enthusiasm for science with teachers and students.

### Invite

scientists to your school or classroom. Members of the plasma physics community are eager to teach your students about plasma and related science using hands-on demonstrations. (The number of classroom visits is limited.)

### Teach

your classes about new areas of technology and research, based on your experience during these plasma science events.

Sponsored by the American Physical Society – Division of Plasma Physics
